Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-12, drawn to an instrument, classified in class 422, subclass 82.05.
- II. Claims 13-22 and 31, drawn to fluid delivery system, classified in class 422, subclass 63.
- III. Claim 23-30, drawn to an automated analysis system, classified in class 422, subclass 62.
- IV. Claims 32-35, drawn to an optical head assembly, classified in class 422, subclass 55.
- V. Claims 36-40, drawn to a method of sample manipulation, classified in class 436, subclass 49.

The inventions are distinct, each from the other because of the following reasons:

Inventions III and I,II are related as combination and subcombination. Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not require the particulars of the subcombination as claimed for patentability, and (2) that the subcombination has utility by itself or in other combinations (MPEP § 806.05(c)). In the instant case, the combination as claimed does not require the particulars of the subcombination as claimed because at least two material exchange stations are not required. The subcombination has separate utility such as a fluid analysis system that does not require tips.

Inventions V and I,II,III,IV are related as process and apparatus for its practice. The inventions are distinct if it can be shown that either: (1) the process as claimed can

be practiced by another materially different apparatus or by hand, or (2) the apparatus as claimed can be used to practice another and materially different process. (MPEP § 806.05(e)). In this case the process as claimed can be practiced by another and materially different apparatus, such as one that requires aspiration.

Inventions I,II,III and IV are related as subcombinations disclosed as usable together in a single combination. The subcombinations are distinct from each other if they are shown to be separately usable. In the instant case, invention IV has separate utility such as a device with a movable fluidic head that can deposit a sample independently of predetermined fluid exchange stations. See MPEP § 806.05(d).

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art because of their recognized divergent subject matter, restriction for examination purposes as indicated is proper.
